1 Introduction

Hi everyone! In this workgroup we have to make a website about videogames. We have also to create webpages about games, consoles, software houses and gendres. To divide the work properly we decided to follow this separation by generations: history of video game consoles.

2 Our Topic: eighth and future generation

The task of our group is to find elements for the eighth and future generation, so more or less from year 2012 to 2020 and what is coming next.

3 What to do

1. Learn about eighth and future generation: discover what is new and really innovative, we have to create interest in the reader.
2. make a research, write it down and then insert it in the template

4 How to organize the work

We have to cover 4 different topic: Games, genres, software houses, consoles; so we have to divide the works.

5 Deadlines

- **Friday November 6th @ 14:30:** "For the Midway Milestone, we'll have the two teams presenting online on MS Teams the status of the project. We'll start with Group 2 and then move to Group 1. Each group has 15 minutes." For this Milestone please make sure to have at least written down the summary content.
- **Tuesday November 10th @ 23.30:** Pages Deadline
- **Monday November 12th @ 23.55:** "For the Final Milestone, we'll have the two teams presenting online on MS Teams the result of the group project. Group 1 will start. Each group has 25 minutes."

6 Style

Every generation has its characteristic CSS style. We have to think up the design for the 8th generation and then communicate and discuss it with the css leader. If you have any idea do not hesitate to contact me.

7 How to work

The pages should be filled following the logic described in Daniel Gelman's document, *"how to work DanielGelman.pdf"*.

8 Who is going to do What

- Important games: Morgan Arthur
- Important Software houses: Ben Amor Ali
- Genres: Morgan Arthur
- Consoles: Soresina Federico

9 Games

Action Adventure

- GTA V (2013)
- Last of Us (2013)
